(a) pair creation (|Q| = 2), T_2 = 1
lines: exact average; circles: second-order kernel formula
leakage $P(M \neq 0)/\kappa^2$
t
noise (same T_2)
white
static
OU
telegraph
(b) transverse field (|Q| = 1), T_2 = 1
leakage $P(M \neq 0)/\kappa^2$
t
noise (same T_2)
white
static
OU
telegraph
(c) leakage relative to white noise of the same T_2 (solid |Q| = 2, dashed |Q| = 1)
static limit $(\sqrt{\pi}/2)|Q|$, |Q| = 2
static limit $(\sqrt{\pi}/2)|Q|$, |Q| = 1
leakage ratio to white noise, t = 10
noise strength $1/T_2$
static, Q1
static, Q2
OU, Q1
OU, Q2
telegraph, Q1
telegraph, Q2
(d) covariant error: identical for every process (max dev 9e-13)
error of m_s / κ
t
no noise
white, T_2 = 0.5
static, T_2 = 0.5
OU, T_2 = 0.5
telegraph, T_2 = 0.5
