(a) domain walls
Theorem F uses global state factors, so it is the same for both walls
error of n_C
t [1/J]
Theorem A/E (Heisenberg only)
Theorem F, wall 10
true |error|, wall 10
Theorem F, wall 40
true |error|, wall 40
(b) density waves
error of n_C
t [1/J]
Theorem A/E (Heisenberg only)
Theorem F, wave 20
true |error|, wave 20
Theorem F, wave 80
true |error|, wave 80
Theorem F, wave 160
true |error|, wave 160
(c) both pictures forget diffusively
$u^{-1/2}$
u or s [1/J]
a(u): observable density pairing
m(u): observable coherence pairing
$\varepsilon\gamma$(s), wall 10
$\varepsilon\kappa$(s), wall 10
$\varepsilon\gamma$(s), random
$\varepsilon\kappa$(s), random
(d) tightness over 1500/J
wave 20
wave 40
wave 80
wave 160
wall 10
wall 40
Neel
random
bound / sup$_t$ |true error at C|
Theorem A/E at t = 1500
Theorem A/E at the peak time
Theorem F, supremum over all t
