51-ion Néel quench (BEQS data)
staggered magnetization (charge-0 observable)
P(initial magnetization sector) / P at t = 0
time [ms]
moments of the total magnetization M
D5/2 decay alone (τ = 1.17 s): drift of ⟨M⟩
D5/2 decay alone: Poisson growth of Var M
⟨M⟩(t) − ⟨M⟩(0)
Var M(t) − Var M(0)
time [ms]
learned 10-ion model, Néel quench: effect of U(1)-breaking terms
BEQS bias bound 2t‖k‖₁‖O‖
global Zeno bound (Thm B3)
forgetting bound (Thm A)
commutator-form certificate (Thm B3′)
actual error |Δ m_s|
trivial bound 2 osc(O)
time [ms]
