(a) dotted: Theorem A; solid: F_{abs}; dashed (hidden): true
error of n_C (domain wall)
t [1/J]
F_{abs}, interacting, Δ = 1
F_{abs}, quasi-free, Δ = 0
(b) observable factors (H_O)
u [1/J]
$\|i[\delta H, O_u]\|$, interacting, Δ = 1
$\|\nabla c_u\|_1$, interacting, Δ = 1
$\|i[\delta H, O_u]\|$, quasi-free, Δ = 0
$\|\nabla c_u\|_1$, quasi-free, Δ = 0
$u^{-1/2}$
(c) state factors (H_ρ), domain wall
s [1/J]
largest gradient, interacting, Δ = 1
largest current, interacting, Δ = 1
largest gradient, quasi-free, Δ = 0
largest current, quasi-free, Δ = 0
$s^{-1/2}$
(d) tightness
wall
Neel
lowest mode
random
F_{abs}, interacting, Δ = 1
Theorem A, interacting, Δ = 1
F_{abs}, quasi-free, Δ = 0
Theorem A, quasi-free, Δ = 0
$\sup_t$ bound / peak true error
