leakage P(M ≠ 0), κ = 0.002, γ_c = 1
II and III coincide exactly
I charged Hamiltonian (κΣX_i)
II covariant flips (σ±)
III X dephasing
Theorem B6 bound for III
time t [1/J₀]
t = 10: only the charged parts feel γ_c
I: leakage
II: leakage
III: leakage
III − II: staggered magnetization
collective dephasing γ_c
order of the response: 2 = first, 4 = second
Δ(2κ) / Δ(κ)
I (leakage)
II (leakage)
III (leakage)
charged part of III, fixed flips (m_s)
γ_c
